

Introduction

This document was generated to identify third-party hardware components tested with GigE Vision Cameras from Allied Vision. This is not a complete list of all compatible products, only a list of products that have been tested by Allied Vision.

GigE network interface cards

The network interface card is the most critical system component, and for maximum performance we highly recommend using one of the following PCI/PCI-E cards.

Manufacturer	Model	PCI-32	PCI-Ex 1	PCI-Ex 4
Intel Corporation	Intel® PRO/1000 GT Desktop Adapter	✓		
Intel Corporation	Intel® PRO/1000 PT Desktop Adapter		✓	
Intel Corporation	Intel® CT		✓	
Intel Corporation	Intel® PRO/1000 PT Dual Port			✓
Intel Corporation	Intel® ET2 Server Quad Port			✓
Intel Corporation	Intel® I340-T4 Server Quad Port			✓
Intel Corporation	Intel® I350-T2 Server Dual Port			✓

The following Intel cards have performance issues and are not recommended:

- Intel® PRO ET Server Quad Port
- Intel® PRO/1000 MT
- Intel® PRO/1000 PT Quad Port. This card lacks Microsoft Windows® 7 operating system support.

For a full list of which Intel cards are supported in Microsoft Windows® 7 operating system, see <http://www.intel.com/support/network/sb/CS-030613.htm>.

GigE switches

We recommend that you work with manufacturers to select switches to satisfy your requirements. It is not possible to test a majority of new and existing GigE switches. The primary consideration when selecting a switch should be system capacity. These include things like: RAM, flash memory, packet buffer memory, switch fabric speed, switching capacity and maximum bandwidth in packets per second.
